| Maximum Marks | 2 Marks       |

Project Name: Online Complaint Registration System (MERN Stack)

Project team shall fill the following information in the proposed solution template.

| S.NO | PARAMETER                                   | DESCRIPTION                                                                                                                                                                                                                     |
|------|---------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.   | Problem Statement<br>(Problem to be solved) | Citizens struggle to file and track complaints; officers have no digital way to manage assigned complaints; admins can't easily monitor resolution across departments — all still done manually via calls and paper.            |
| 2.   | Idea / Solution<br>description              | A MERN-based web platform where citizens file and track complaints in real time, officers manage and resolve assigned complaints, and admins monitor department-wide performance — all through one role-based, secure system.   |
| 3.   | Novelty/Uniqueness                          | Combines real-time complaint tracking, role-based access for 3 user types, and automated department routing in one unified system — unlike fragmented phone- and paper-based complaint handling.                                |
| 4.   | Social Impact/<br>Customer Satisfaction     | Saves citizens time and frustration reporting issues, gives officers a clear queue to manage instead of scattered paperwork, and builds public trust through transparent, trackable resolution.                                 |
| 5.   | Business Model<br>(Revenue Model)           | For public-sector deployment: funded via municipal/government budget allocation. For a commercial variant: subscription licensing to organizations for internal complaint management, with premium analytics/reporting add-ons. |
| 6.   | Scalability of the<br>Solution              | The modular MERN architecture scales easily with more departments and users, and can extend to SLA-based escalation, a mobile app, and multi-language support without a redesign.                                               |
